Research Brief

POVERTY IN THE SAN FRANCISCO BAY AREA

March 2015

SILICON VALLEY INSTITUTE
for **REGIONAL STUDIES**

EXECUTIVE SUMMARY

This research brief examines aspects of poverty in the San Francisco Bay Area[1], its regional distribution and areas of intense concentration, as well as the demographics of the impoverished population.

For the purposes of this research brief, estimates of the impoverished population are based on the federal poverty thresholds which ranged from $11,490 for a one-person household to $23,550 for a family of four, to $39,630+ for a household with eight or more people in 2013. Households with annual incomes below the appropriate threshold are determined to be living in poverty. These thresholds are intended to provide an indication of the population share that lacks resources for basic needs such as food, clothing and shelter. However, for expensive regions such as the Bay Area, this measure likely underestimates the extent of economic hardship.

KEY FINDINGS

- **The Bay Area poverty rate in 2013 was 11.3% and was trending downward,** though still not far below the recent peak of 12% and much higher than the historical average rates of around 9%. That year, poverty in the Bay Area was more than 4 percentage points below poverty rates in California (17.0%) as a whole or the nation (15.9%).

- **Federal poverty statistics underestimate economic hardship in the region.** Alternative measures indicate significantly higher proportions of the population as impoverished. These include the California Poverty Measure developed by the Public Policy Institute of California (PPIC) and measures of self-sufficiency, developed by the Center for Women's Welfare at the University of Washington School of Social Work.

- **Poverty rates vary significantly across the region.** By county, poverty rates range from a high in San Francisco of 13.8% to lows in San Mateo and Marin Counties of just 7.8% and 8.4%, respectively. Disparities are even greater when looking at Census Tracts. San Francisco's Tenderloin area has a poverty rate of 50.6% while the poverty rate in the outskirts of Vacaville is nearly 0.0%.

- **Children have the highest rates of poverty.** In 2013, just over 1 in 7 of the Bay Area's children lived in poverty. This compares favorably with the rest of the state and nationwide where the same number is more than 1 in 5 (nearly 60% higher), but is alarming nonetheless.

- **The Bay Area's poor children live in pockets of poverty.** While the rate of poverty among children in the Palo Alto Unified School District is just 4.2%, it is 27.9% in the Oakland Unified School District. Poverty rates among school aged children are generally highest in Alameda and Santa Clara Counties, and along the I-80 east west corridor.

OVERVIEW: POVERTY IN THE BAY AREA, 2013

Despite being one of the world's wealthiest regions, there were 829,547 people living in poverty in the Bay Area in 2013. This is just over 11.3% of the region's total population (Figure 1). In comparison to the rest of California and the United States, poverty in the Bay Area is quite low. But although low relative to other geographies, the Bay Area poverty rate is high in comparison to historical averages in the region (during the early part of the last decade, poverty in the Bay Area hovered at around 9%). During the Great Recession, poverty levels reached a peak of just under 12% and have been declining over the last two years.

---

1. The Bay Area is defined as the nine counties that border the San Francisco Bay: San Francisco, San Mateo, Santa Clara, Alameda, Contra Costa, Solano, Napa, Sonoma, and Marin.

Data Source: United States Census Bureau, 2003-2013 American Community Survey, 1-Year Estimates
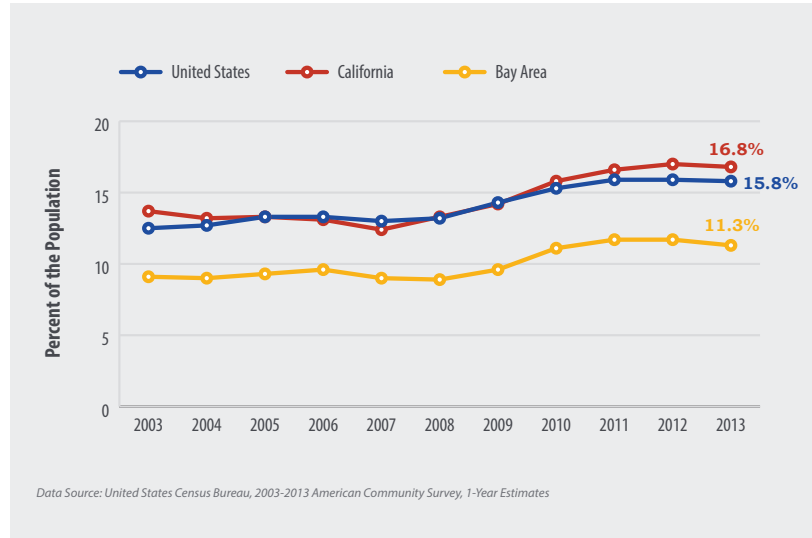

Poverty rates vary significantly across the Bay Area, from a high of 13.8% in San Francisco City/County to a low of 7.8% in San Mateo County (Figure 2). All counties have poverty rates that are significantly below that of the state as a whole. However, the cost of living in the Bay Area is significantly higher than in much of the rest of the state, so these lower rates are misleading. Comparisons across counties in the Bay Area are somewhat more useful, though can still be problematic. The cost of living in Solano County, for instance, is significantly less than it is in San Francisco.

Of the nearly 830,000 people in the Bay Area living in poverty (Figure 3), approximately 200,000 of them live in each of Alameda and Santa Clara Counties. Contra Costa and San Francisco each have well in excess of 100,000 of their residents living below the poverty line. The remaining five counties all have smaller numbers of residents in poverty, but as indicated above some, such as Solano and Sonoma, have among the highest poverty rates.

Figure 2: Poverty Rates in the Nine Bay Area Counties, the Bay Area Overall, California and the United States, 2013
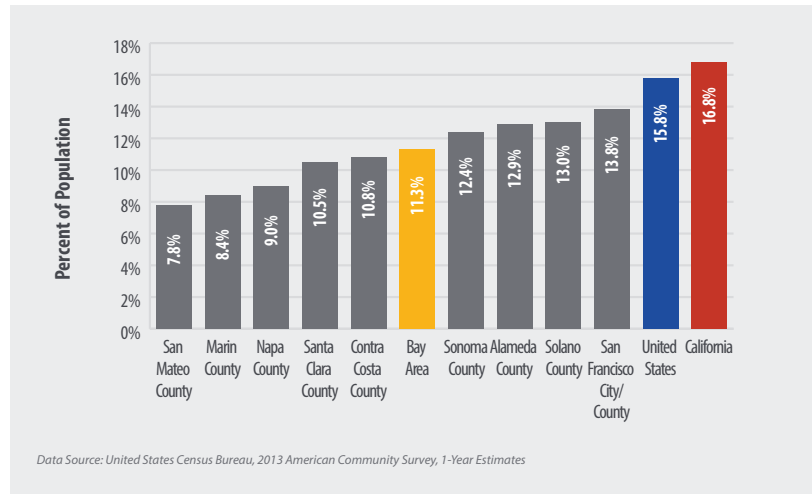

Data Source: United States Census Bureau, 2013 American Community Survey, 1-Year Estimates

Data Source: United States Census Bureau, 2013 American Community Survey, 1-Year Estimates
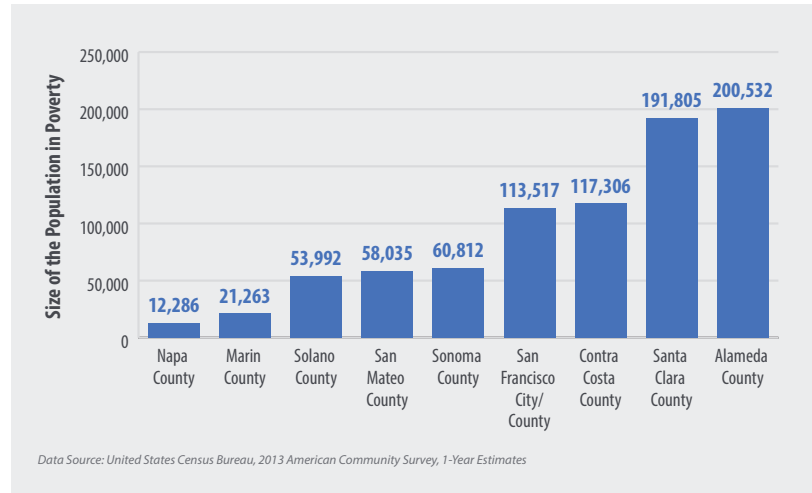

The "poverty deficit" (Figures 4 and 5) provides a way to gauge the magnitude of the Bay Area's poverty problem across different types of families. This deficit measures the difference between family income and the relevant poverty line (which varies based on family size) for all families within the county.

The poverty deficit (the difference between the total income of those in poverty and the sum of their poverty lines) for married couples in Santa Clara County was slightly more than $134 million in 2013. The deficit for families headed by a single woman was $132 million, while the deficit for families headed by a single man was just $49 million. The figure is lower for single men because there are fewer single male households in poverty. As Figure 5 illustrates, on a per family basis, the gap between family income and the poverty threshold is similar across family types and averages approximately $8,000.

HOW WELL DOES THE OFFICIAL FEDERAL POVERTY RATE MEASURE POVERTY?

The method for measuring poverty in the United States was established in the early 1960s and has changed little since.[2] While the official federal poverty rate enables a precise, granular analysis of poverty over time and by geography, it does not provide an accurate one. By not taking the relative costs of living in each region and non-cash public benefits under consideration, the federal poverty rate often underestimates the size of the impoverished population (particularly in high cost regions such as the Bay Area) and makes it nearly impossible to adequately compare regions to one another.

With rents in some parts of the Bay Area 185% higher[3], home prices up to 250% higher[4], and the cost of goods and services 6% higher[5] than in the United States as a whole -- the 'cost of living' in the Bay Area is undoubtedly different. As such, the poverty rate in the Bay Area could be as much as three or four percentage points higher, putting poverty in the Bay Area on par with the state and nation.

The official poverty statistics used in this report are based on a formula that **A)** assumes that one-third of budgets are spent on food when the current figure is closer to one-fifth, **B)** does not adjust for regional differences in the cost of living, and **C)** does not account for non-cash benefits to those living in poverty, for example, food stamps. However, the standard definition of poverty is still a useful tool to determine the extent of severe economic hardship. And, since the federal poverty statistics are reported regularly and at a fine geographic level, they enable a highly detailed analysis over time and within regions.

The U.S. Census Bureau is currently working on an improved measure of the incidence of poverty.[6] Some states are also working to produce better statistics in order to better understand the extent of true economic hardship locally, and California is among them. A recent report by the Public Policy Institute of California (PPIC), produced in collaboration with the Stanford University Center on

Poverty and Inequality, developed a more sophisticated measure of poverty for the state, called the California Poverty Measure (CPM). Using the CPM, the reported incidence of poverty in the Bay Area jumps from just 11.7% (using the federal estimate) to 19.0%, in 2011 (Figure 6).

Another poverty measure is the Self-Sufficiency Standard. The Self-Sufficiency Standard defines the amount of income necessary to meet basic needs without public subsidies or private/informal assistance. This measure differs from the federal poverty calculations in that it considers the costs that a family faces on a day-to-day basis given their location. This measure is therefore different from the federal poverty statistic and the CPM in that it includes measures of differences in the cost of living (e.g., the varying costs of having a toddler versus an older child). There is, accordingly, a significant difference between the measures of poverty and the self-sufficiency statistics reported in Figure 7, which shows the proportion of the households that do not have incomes high enough to be self-sufficient.

While the CPM and Self-Sufficiency standards are arguably more meaningful than the federal poverty statistics, the primary difficulty with using them is that they are not available on a consistent basis over time or for demographic subgroups.

POVERTY IN A BROADER INCOME CONTEXT

Poverty is only one measure of the status of low income households in a region. It is somewhat arbitrary to put one household on one side of the threshold and another household on the other simply because they have incomes that differ slightly. This section provides an indication of the proportion of the population that is near poverty as well as those whose income is much higher than the poverty limits.

Figure 8 presents shares of the population by income group (the ratio of household income to the relevant poverty threshold). The categories are those made available by the Census bureau. From the figure, it is reasonably clear that many additional households are close to experiencing poverty level incomes. In the Bay Area, 6% of the population has incomes between the poverty threshold and 1.5 times the threshold. It could be argued that many of these individuals are in fact in poverty.

Figure 8: Population Share by Income to Poverty Threshold Ratio in the Bay Area, California and the United States, 2013

Data Source: United States Census Bureau, 2013 American Community Survey, 1-Year Estimates
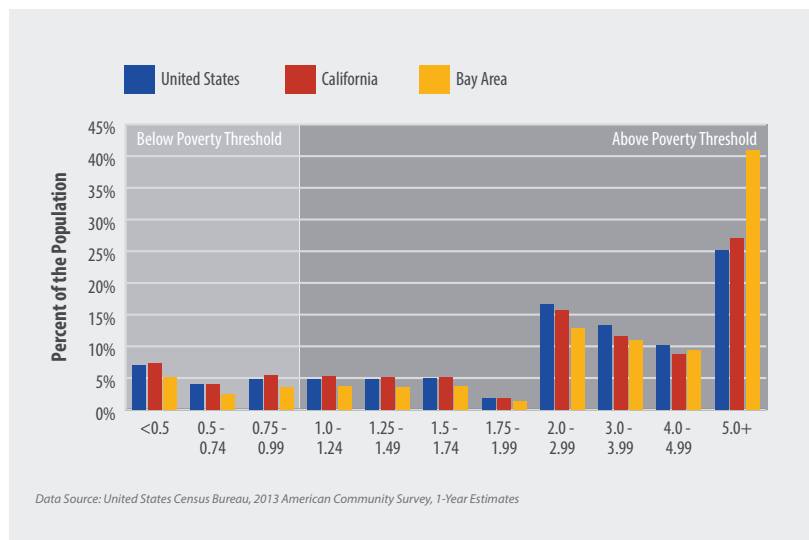

At the other end of the distribution, over 40% of the Bay Area population makes in excess of five times their relevant poverty line – more than 50% higher than in California or the United States. Furthermore, every share in categories below four times the poverty line is lower in the Bay Area than elsewhere. Although there are still large numbers of individuals in the lower income categories, their proportions are smaller than in California or the rest of the United States.

Figure 9 provides an indication of the extent to which income group shares have changed over the course of the Great Recession. The figure presents the same results for the Bay Area in 2013 that were presented in Figure 8, but compares them to 2007, the last non-recession year, and 2011, the year in which the poverty rate for the Bay Area peaked.

Data Source: United States Census Bureau, 2007, 2011, and 2013 American Community Survey, 1-Year Estimates

Thus far, the effect of the recession (the change between 2007 and 2013) has been an increase in population shares at the bottom, in all categories below 1.75 times the poverty line, and a reduction in shares at the top. Since 2011, the shares at the bottom have been falling, albeit slowly, and the shares at the very top have been recovering. The distribution of income, as measured relative to the poverty line, has shifted measurably toward lower incomes. This is not entirely surprising as many lower earning jobs were lost and significant investment and interest income disappeared for higher-earners during the recession.

POVERTY BY AGE

Children experience poverty at higher rates than the general population. In 2013, the rate of poverty among children in the Bay Area was 13.8%, more than two percentage points higher than among the general population.

One of the reasons this is true is that the most focused and directed anti-poverty program ever pursued by the United States government is Social Security. This is a program explicitly designed to address poverty among the elderly, which in the 1930s was running as high as 50%. Figure 10 speaks to the effectiveness of Social Security in alleviating poverty among individuals aged 60 and above. Those between the ages of 60 and 74 experience lower rates of poverty than does any other age group.

Children also tend to have higher rates of poverty because many of them live in households with a single parent. About 27% of all children in the Bay Area live in households with a single female parent and 30% of these children live in poverty. Among those living with a single mother and who are less than 6 years old, 35% live in poverty. The challenges of generating an income and raising a child as a single mother in the Bay Area are significant. They do, however, appear to ease as children start going to school, freeing up the mother's time to work.

Data Source: United States Census Bureau, 2013 American Community Survey, 1-Year Estimates
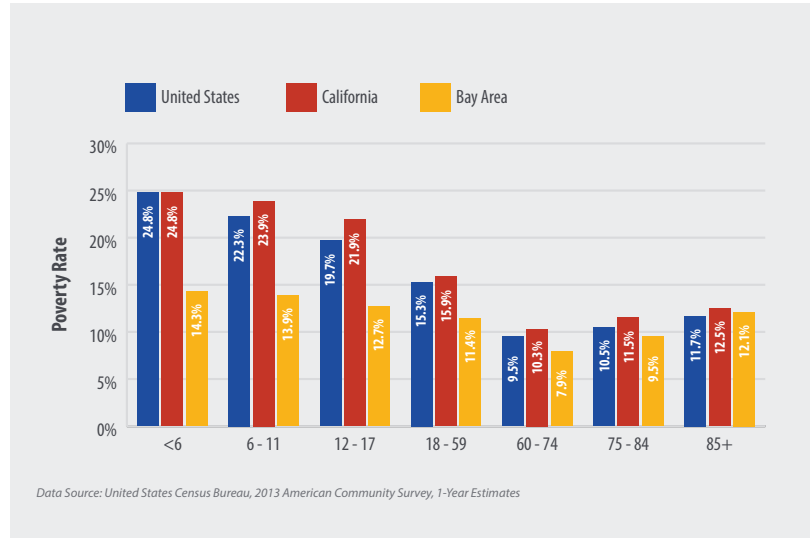

Relative to the U.S. and California as a whole, poverty rates in the Bay Area are lower for every age group with the exception of those more than 85 years old. For those individuals, the poverty rate nationwide is lower than it is in the Bay Area. Since measures of poverty are not adjusted for local costs of living, the fact that Bay Area poverty rates are significantly lower than elsewhere may simply be an artifact of this failure to adjust.

Poverty rates in California are uniformly higher than they are nationally. And, in the Bay Area, California, and the rest of the United States, child poverty rates are extremely high. For those under the age of six, one in four are living in poverty in California and the United States, but just one in seven in the Bay Area. The figures are a little less extreme for teenagers, with one in eight Bay Area teenagers living in poverty. The Bay Area figures for child poverty are significantly better than in California or the rest of the county, but children still have among the highest poverty rates of any age group in the region.

The Great Recession significantly increased the national childhood poverty rate from roughly 18% in 2007 up to 22.6% in 2012, an increase of roughly 25%. In the Bay Area, the increase was smaller at just 3.3 percentage points from 11.2% in 2007 to 14.5% in 2012, amounting to a 30% increase in the incidence of poverty among children (Figure 11). Child poverty peaked in 2012 and decreased slightly in 2013. It is expected that as the economy continues to expand, child poverty rates will continue to fall. It is unlikely, however, that the rates will fall below the 10% level, where, again, this means that 1 in 10 children in the region is growing up in a household without sufficient resources to meet its needs.

Data Source: United States Census Bureau, 2013 American Community Survey, 1-Year Estimates
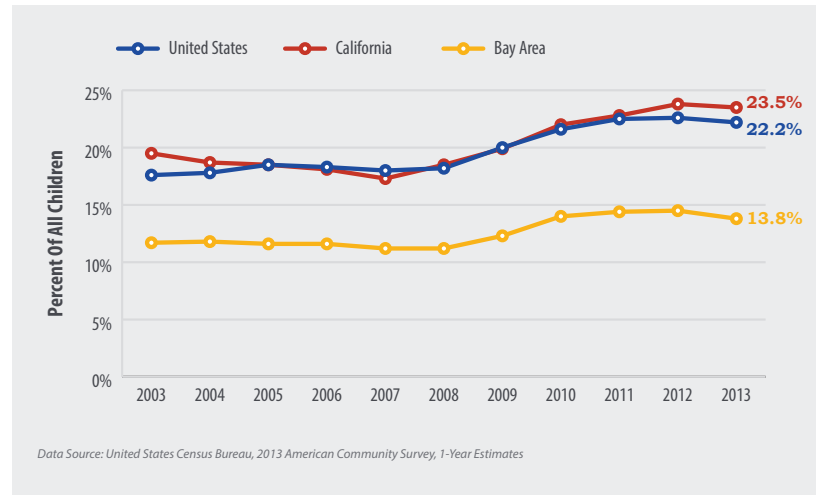

A CLOSER LOOK AT POVERTY AROUND THE BAY AREA, 2012

Poverty in the Bay Area is not homogeneous. At the county level, poverty rates range from approximately 8.5% in Marin and San Mateo Counties to more than 14% in Solano and San Francisco Counties (Table 1). Bay Area child poverty rates, which are uniformly higher than overall poverty rates, range from approximately 10% in Marin and San Mateo Counties to 18% in Solano County.

Table 1: Poverty Rates in the Bay Area, Bay Area Counties, California and the United States, 2012

Regions	Poverty Level Percent of Population			
	All	**Children**	**Ages 0-4**	**Ages 5-17**
United States	15.8%	22.2%	24.8%	20.8%
California	16.8%	23.5%	24.8%	22.5%
Alameda County	13.0%	15.4%		15.3%
Contra Costa County	10.8%	13.4%		12.7%
Marin County	8.7%	10.3%		9.2%
Napa County	9.7%	13.7%		12.6%
San Francisco City/County	13.8%	14.4%		14.7%
San Mateo County	8.0%	10.0%		9.4%
Santa Clara County	10.5%	12.9%		12.0%
Solano County	12.9%	17.8%		16.6%
Sonoma County	12.1%	15.2%		13.6%
Bay Area	11.7%	14.5%		13.8%

Data Source: United States Census Bureau, Small Area Income Estimates

At a smaller geographic scale, it is clear that pockets of significant poverty exist around the Bay Area (Tables 2 and 3). Census tracts with poverty rates in excess of 45% exist in Alameda, Santa Clara, and San Francisco Counties (Table 2, Figures 12 and 13). Similarly, some school districts have students with poverty levels in excess of 20% (Table 3 and Figure 14).

Table 2: Poverty Rates in Bay Area Census Tracts, 2012

Census Tract	Area	Poverty Rate (%)
Low Poverty Tracts		
2529.15	Solano County - Outskirts of Vacaville	0.0%
6095.00	San Mateo County - San Carlos	0.1%
4301.02	Alameda County - North, Unincorporated	0.1%
2007.03	Napa County - West, City of Napa	0.3%
High Poverty Tracts		
4105.00	Alameda County - Central Oakland	47.4%
4228.00	Alameda County - Near Berkeley Campus	48.5%
5009.02	Santa Clara County - Near San Jose State Campus	49.5%
125.02	San Francisco City/County - Tenderloin	50.6%

SUMMARY

Demographics of Bay Area Poverty

The demographic characteristics of those living in poverty in the Bay Area differ from those of the general population in significant ways. The Appendix presents a wealth of comparisons between the two populations that shed light on these differences, some of which are important in formulating policy prescriptions for combating poverty. Among the most salient demographic characteristics of the Bay Area's impoverished population are the following:

Race & Ethnicity: Bay Area residents who are Black or African-American are more likely to be living in poverty than are other racial/ethnic groups (Table A.1.1).White, non-Hispanic residents are the least likely to live in poverty (with a poverty rate of 7.2%) despite accounting for a majority of the impoverished population.

Age: Children and young adults (under age 35), are more likely to be living in poverty (Table A.1.2). Households headed by young adults under age 35 are more likely to be impoverished (27.2% poverty rate, compared to 18.5% for the general population) (Table A.3.4).

Marital Status: Those living in poverty tend to be single, whether never married (poverty rate or 16.4%), divorced (13.9%), separated (20.8%), or widowed (12.8%). In comparison, the poverty rate for married Bay Area residents was only 5.1% in 2013 (Table A.1.4).

Home Ownership: Impoverished residents are less likely to own a home. Twenty-one percent of households below the poverty threshold are occupied by homeowners, whereas 55% of the general Bay Area households are in owned-homes (Table A.1.7).

Household Type: Unmarried women, both with and without children, are more likely to live in poverty (Table A.1.8).

Labor Force Participation: Labor force participation rates among the Bay Area's prime working-age impoverished population (ages 20-54) are between 53.5-65.5%, which is lower than for the population as a whole (47.3%). Labor force participation rates among impoverished men are higher than among impoverished women, particularly for those between the ages of 25 and 49 (possibly reflecting the higher child care obligations of single mothers) (Table A.2.1).

Unemployment Rates: Unemployment rates are very high among those in poverty, with 29% of the impoverished population unemployed versus 8.3% for the general population (Table A.2.2). Unemployment is particularly high among impoverished non-Hispanic Black or African American residents, at 48.3% (Table A.2.3).

Occupations: Accounting for 17% of the Bay Area's impoverished workers, Food Preparation and Service occupations are the largest single source of work (Table A.2.7). Median earnings among full-time, full-year impoverished employees in this category ($14,106) are approximately 53% of the median earnings for all Bay Area Food Preparation and Service workers ($26,398) (Table A.2.8).

Number of Workers: Nearly half of all Bay Area impoverished families have zero or one worker, whereas in the broader Bay Area population, the majority of families live in households with two or more workers (Table A.2.9).

Transportation to Work: Bay Area impoverished workers are more likely to carpool, take public transportation, or walk to work than Bay Area workers as a whole (Table A.2.10).

Type of Income: Social programs, in particular, Supplemental Security Income and Public Assistance,1 play a much larger role in income for impoverished households (Table A.3.5).

Per Capita Income: Among the impoverished population, per capita income is just $6,286 per year (Table A.3.8).

Education: Nearly three-quarters of the impoverished population 24 years or older does not hold a college degree, and nearly one-third has less than a high school diploma (Table A.5.1). Among the foreign born impoverished population, nearly half have less than a high school diploma (A.5.3).

Education and Earnings: Even with comparable levels of education, median earnings among the impoverished are dramatically less than in the general population (Table A.5.7 and A.5.8).

Health Insurance Coverage: Bay Area impoverished residents have much lower health insurance coverage rates (23.1% not covered) in comparison to the general population (9.7% not covered) (Table A.6.1).

Geographic Mobility: While 11.3% of the Bay Area's population in 2013 was living in poverty, 16.7% of the new residents who relocated to the Bay Area in the prior year were impoverished (Table A.7.1).

Nativity: The foreign-born proportion of impoverished individuals (33.4%) is not significantly different from that of the general population (30.2%) (Table A.8.1).

Language: Those living in poverty are more than twice as likely to speak English "Less than Well" than the general population (17.4% and 8.7%, respectively) (Table A.9.1).

Disability: At all ages, those living in poverty are more likely to report having a disability (16.0%) than are those in the general population (9.7%) (Table A.10.1). In particular, they are much more likely to report cognitive, ambulatory, or independent living difficulty (Table A.10.2).

Veteran Status: While Veterans made up 5.5% of the Bay Area population in 2013, they only accounted for 3.1% of the impoverished population (Table A.11.1).

Fertility: Women living in poverty are significantly more likely to have given birth in the last 12 months (71 per 1,000 women) than are women in the general population (51 per 1,000). This is particularly true for younger women, though also true for those ages 40-44. Those who have given birth are also twice as likely to be single (Table A.12.1). For non-Hispanic White women, those in poverty who have given birth in the last 12 months are three times more likely to be single (Table A.12.2).

1. Public Assistance income provides cash payments to poor families or individuals and includes Temporary Assistance to Needy Families (TANF) and General Assistance (GA).

INSTITUTE FOR REGIONAL STUDIES

The Silicon Valley Institute for Regional Studies provides research and analysis on a host of issues facing Silicon Valley's economy and society. The Institute is housed within Joint Venture Silicon Valley.

JOINT VENTURE SILICON VALLEY

Established in 1993, Joint Venture Silicon Valley brings together established and emerging leaders—from business, government, academia, labor and the broader community—to spotlight issues, launch projects, and work toward innovative solutions. For more information, visit www.jointventure.org.

A.2.8 Median Earnings by Major Occupation Group

Bay Area Population		
Major Occupation Group	**All Workers**	**Full-Time, Year-Round Workers**
Management, Business, and Financial	$120,906	$125,944
Computer, Engineering, and Science	$96,725	$100,755
Education	$45,340	$65,491
Legal, Community Service, Arts, and Media	$58,438	$80,604
Healthcare Practitioners and Technicians	$78,589	$86,649
Healthcare Support	$30,226	$39,294
Protective Service	$45,340	$74,559
Food Preparation and Service	$17,733	$26,398
Building and Grounds Cleaning and Maintenance	$21,864	$32,242
Personal Care and Service	$35,264	$70,528
Sales and Related	$32,242	$55,415
Office and Administrative Support	$36,272	$49,370
Farming, Fishing and Forestry	$21,159	$25,189
Construction and Extraction	$35,264	$50,377
Installation, Maintenance, and Repair	$55,415	$60,453
Production	$46,146	$55,415
Transportation and Material Moving	$29,017	$40,302
Overall	$45,340	$62,468
Bay Area Impoverished Population		
Major Occupation Group	**All Workers**	**Full-Time, Year-Round Workers**
Management, Business, and Financial	$5,542	$10,075
Computer, Engineering, and Science	$5,652	$5,189
Education	$6,045	$10,075
Legal, Community Service, Arts, and Media	$6,045	$10,075
Healthcare Practitioners and Technicians	$6,045	$10,075
Healthcare Support	$6,549	$9,672
Protective Service	$11,083	$11,990
Food Preparation and Service	$10,075	$14,106
Building and Grounds Cleaning and Maintenance	$8,564	$12,091
Personal Care and Service	$6,146	$12,091
Sales and Related	$6,549	$10,982
Office and Administrative Support	$6,045	$10,075
Farming, Fishing and Forestry	$9,169	$13,098
Construction and Extraction	$8,161	$14,609
Installation, Maintenance, and Repair	$11,083	$13,300
Production	$8,060	$18,841
Transportation and Material Moving	$8,060	$11,083
Overall	$7,557	$11,587
Data Source: United States Census Bureau, 2013 American Community Survey, 1-Year Estimates		

A.2.9 Families by Number of Workers and Median Family Income

Bay Area Population			
Number of Workers	**Families**	**Percent**	**Median Family Income**
0	231,295	12.5%	$45,340
1	646,540	35.0%	$75,566
2	805,655	43.6%	$120,906
